

Thermofluid Analysis System with Unstructured Mesh Generator

System configuration & operation procedure

Mesh generation

Functions

- Compressible/incompressible fluid
- Steady-state/transient, turbulence models
(Standard $k-\epsilon$, RNG $k-\epsilon$, realizable $k-\epsilon$, AKN $k-\epsilon$, GPC $k-\epsilon$, BGC $k-\epsilon$, SST $k-\omega$, SST-SAS, MP AKN $k-\epsilon$, Spalart-Allmaras, LKE $k-kL-\epsilon$, LES, VLES, DES)
- Aerodynamic noise analysis
- Thermal fluid analysis (fluid/solid)
- Radiation (VF/flux method, solar radiation)
- ALE/overset mesh/dynamic motion
- Adaptive mesh refinement
- Humidity/condensation (defrosting)
- Diffusion/chemical reaction/combustion/CVD
- Porous media/heat conduction panel/fan model
- Electric current analysis
- Free surface/dispersed multiphase flow
- Thermoregulation model (JOS)
- Cavitation
- etc.
