

“Old Town Bobsleigh” Network Project

Showa-ss, Kamijima Netsushori, and Material are known as Ota brand, and Dome Carbon Magic, Software Cradle, and University of Tokyo purposely joined the project. They all will collaborate in developing the Japan’s first bobsleigh.

Wind tunnel (Dome Carbon Magic Co., Ltd.)

Measurement of aerodynamic resistance:

An actual bobsleigh is mounted in a wind tunnel, and turbulence intensity is determined and verified numerically and visually.

Simulation Review

Numerical simulation helps understand the detailed external flow over a body. Also, highly accurate analysis results can be obtained by matching with wind tunnel test results.
